

GREEN TECH

Event Description:

Modern day technology is unparalleled, and has developed by leaps and bounds in the past few centuries. As our understanding of materials, techniques, and processes improve, new technological innovations spring up to address man's everyday issues, and dramatically improve our lifestyle. Such innovations have greatly reduced the effort of man, and increased the efficiency of machines, but a lot of potential remains untapped.

Your task is to use existing technologies, used for any purpose, be it industrial, academic tools, or entertainment, and repurpose them for an environmentally useful purpose, be it reducing CO₂ emissions, enhancing green cover, or other similar fields.

Let your imagination run riot, and come up with new and innovative applications for existing tech.

Event Format:

The event comprises of 2 rounds:

1. An abstract submission round, where participants write a short abstract about the project proposal.
2. Presentation round, participants will have to present their idea. If it is an easily implementable concept, a working model will fetch brownie points.

Judging Criteria:

- Creativity
- Ingenuity
- Environmental Impact
- Simplicity
- Effectiveness
- Cost
- Practicality
